

ArcWest Exploration Golden Triangle Copper-Gold Projects: Todd Creek and Oweege Dome

Eight BC porphyry copper-gold projects... Three partner funded projects (and counting) equals multiple chances for discovery with zero dilution...

- ArcWest has eight 100% owned porphyry copper-gold projects throughout British Columbia, including one of the largest and most prospective land positions in BC's renowned Golden Triangle. Three AWX projects (Oxide Peak, Eagle and Oweege Dome) are currently undergoing partner funded exploration. ArcWest's Oweege Dome and Todd Creek projects neighbour Pretium's Brucejack mine property and contain some of the largest underexplored porphyry copper-gold systems in British Columbia. **Newcrest Mining recently announced the acquisition of Pretium in a CAD \$3.5 billion transaction.**
- ArcWest's Golden Triangle neighbours include Teuton Resources (TUO), Tudor Gold (TUD), Seabridge Gold (SEA) and Pretium Resources (PVG). These companies have CAD valuations ("MC"; as of Jan. 11th, 2022) of \$108 million, \$395 million, \$1.58 billion and \$3.36 billion, respectively.
- **Collectively, the KSM-Iron Cap (Seabridge), Treaty Creek (Tudor Gold-Teuton Resources-American Creek Resources) and Brucejack (Pretium/Newcrest) projects contain an estimated 199 million oz gold, 790 million oz silver and 51 billion lbs copper (Roulston, 2021). ArcWest's Todd Creek and Oweege Dome projects are situated in the heart of one of the world's largest endowments of gold, silver and copper.**
- **ArcWest is in discussions with potential partners for an earn-in and joint venture agreement on its Todd Creek project. Discussions with potential partners for ArcWest's additional projects are ongoing.**
